Εχω μια υποψια και για τα 2 σφαλματα. Σε καποιο commit περασαμε σε InnoDB, αλλα δεν εχει καθαριστει παντου στον κωδικα σε ολα τα CREATE TABLE η δημιουργια FULLTEXT index, η οποια δεν επιτρεπεται στο InnoDB, πχ upgrade.php γραμμες 656, 706, 717, 883, 889. Αυτο εχει σαν αποτελεσμα η διαδικασια του upgrade να μην ολοκληρωνεται σωστα και αρα να υπαρχουν τα σχετικα σφαλματα μετα το upgrade. Αληθεια, στο upgrade δεν πεταξε errors ?
